

Transparent Display Partition

Applying newly developed
“Transparent Display” to partitions

~ “Securing Social Distance” + “New added-value” ~

31.5" Transparent Display Partition (W : about 700mm × H : about 400mm)

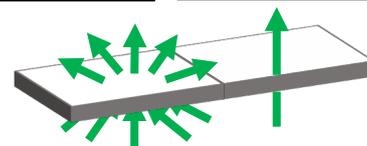

POINT

1

Displaying the information on a
“transparent display” by switching it
between “transmission mode” and
“scattering mode”

scattering mode

transmission mode

POINT

2

High transparency allowing the background
to be seen through only with room light

Transmittance:
about 60%

POINT

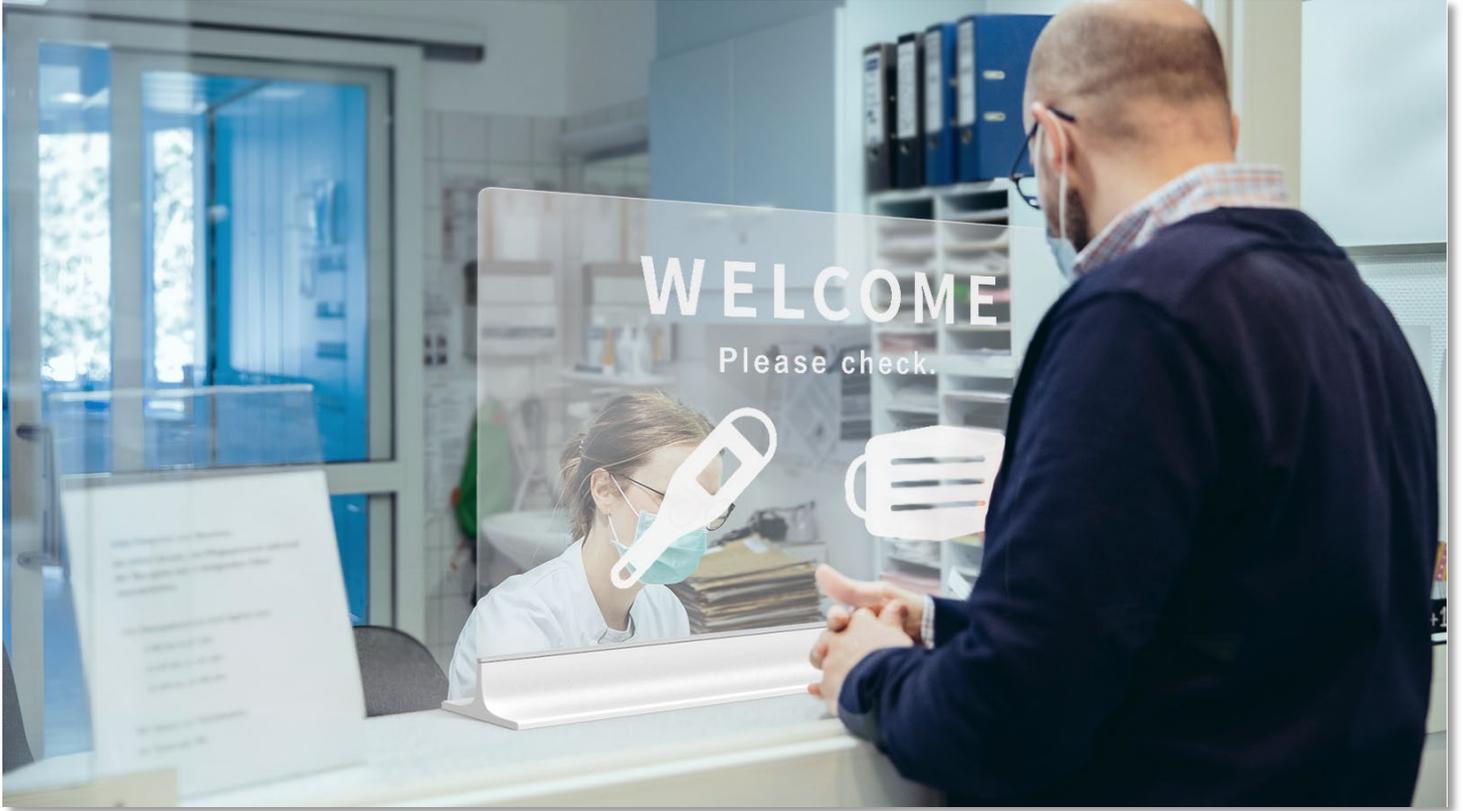

3

Achieving very low power consumption
utilizing external light only instead of
using its own light source.

Less than 1/10 power
of conventional display

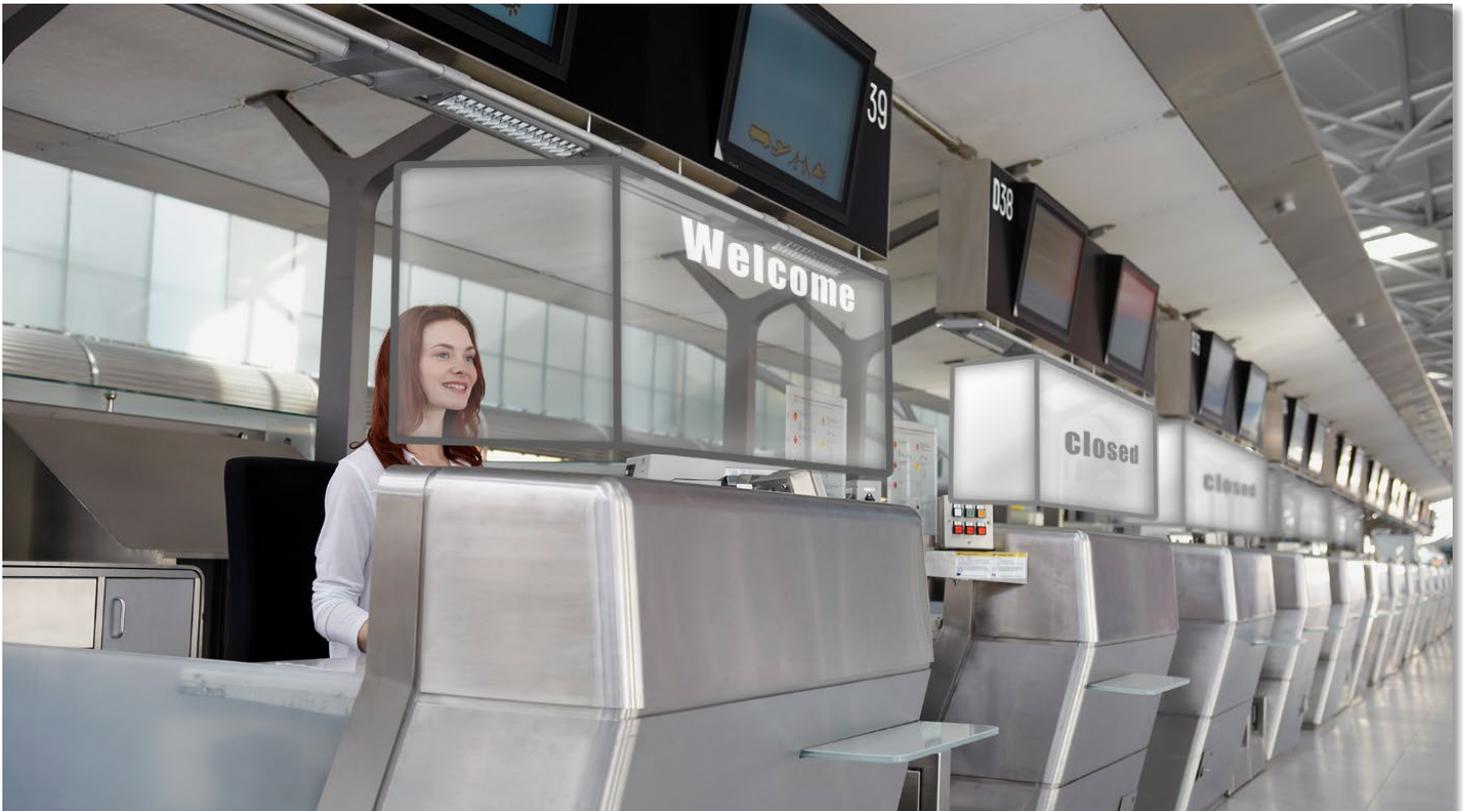

Medical Center

Displaying the important information on the infection prevention partition

Airport

Supporting customers with services, securing Social-Distance

Office

Allowing an active face-to-face meeting in the New Normal era

Meeting Room

Changing the display mode either the daylight intake or block and information can show onto the partition when needed

※ The display in the scene is assumed to be large or tiling

Restaurant

Creating a dining atmosphere by best suited contents to match the dishes or scene

Taxi

Achieving both security and convenience by the information shown on the anticrime partition
